FOR IMMEDIATE RELEASE**Xi Graphics Adds New Graphics Drivers for Trident Chips**

Linux and Solaris (on Intel) operating systems are supported

DENVER, November 4, 2002 ---- Xi Graphics, Inc. announced today that it has released Linux and Solaris (on Intel) graphics drivers for seven models of Trident CyberBLADE graphics chips used in notebooks and on computer motherboards. A total of twenty-eight drivers were added to the Summit v2.2 graphics product line (four for each chip), and are available in Bronze and Silver Editions of the Desktop (DX) Series and Laptop (LX) Series. The drivers are for use on Intel/AMD 32-bit computer platforms, including SMP systems.

Each Summit v2.2 graphics driver is available in demo mode for download from the Xi Graphics Web site for compatibility and performance testing. Users can purchase a Summit License Key on-line which, when installed, converts a demo into permanent product. A license is required for each computer on which an Accelerated-X Summit driver is used as permanent product. Prices for the License Keys range from \$69 to \$129, depending upon the driver. Quantity discounts are available.

Customer support, which the Company claims is prompt, courteous and competent, is also free via phone and e-mail to its Denver, Colorado facilities.

About Xi Graphics, Inc.

Xi Graphics, Inc. has developed commercial accelerated graphics drivers and X servers for the X Window System on Linux and UNIX® systems since 1994. For information on the Company, visit www.xig.com.
