UNIX® Graphics support for the Toshiba Satellite Pro 4600 & XP Chip
Xi Graphics offers laptop support for Solaris, as well as Linux

DENVER — Xi Graphics Inc., a privately held firm that specializes in premium graphics support software for Linux and UNIX systems, has released graphics system software support for the Toshiba Satellite Pro 4600, that uses the Trident XP graphics chip. Besides running on Linux, the new software also supports laptops running Solaris 8 for Intel. This support is available in the standard Laptop Accelerated-X boxed product, and is free to current owners of Xi Graphics Laptop Server, v6. Current owners may download from the ftp site at <ftp.xig.com>.

“Solaris fans will be particularly happy to hear about this new support,” said David Methvin, Xi Graphic’s President and CEO. “It’s often difficult to find good laptop graphics support for Solaris, as seems to be the case with the Satellite Pro 4600.”

A free downloadable demo is available at the Xi Graphic’s Web site at www.xig.com. The cost of Laptop Accelerated-X is \$149.95 domestic. Customers may order via the Web site or the toll-free number at 800-946-7433. Currently, support for the Satellite Pro 4600 is 2D, with Dual View ability in both Single Logical Screen and Zoom view modes. OpenGL 3D support for the laptop is expected to be announced shortly. All Xi Graphics’ products come with free technical support via phone and e-mail.
